

INSTALLATION TIPS

DIAGONAL CORNER BASE CABINETS

Euro-Rite offers 2 sizes of diagonal base cabinets. A 36" and a 42". These unique cabinets are popular for large kitchens. Both can fit a sink but the 42" is the only one large enough to fit a double basin sink. If you would like a sink in the 36", it has to be a single basin.

When installing diagonal corner base cabinets here are a few things to remember:

1. The cabinets are not directly mounted to the wall, there is a 5" space between the backboard and the wall.
2. The CSB42 come with 2 doors
3. The CDB36 comes with 1 door and an adjustable shelf that must be installed prior to the top shelf.
4. Do not install a drawer bank or door/drawer unit on either side of these cabinets.
5. Where a dishwasher is beside these cabinets, use a filler strip or DW gable to allow for space.
