THE PROJECT

STEP 1

Install our hanging rail secure to the inside closet wall studs using predetermined and marked measurements.

STEP 2

Easily lift and hang the components of each module by the notch precut for you.

STEP 3

Connect the components with shelves, rods, and accessories. Lastly, put 'Eveything in its place!'

Add space and function to your new closet, by adding drawers to the tower component.

Includes:

• Drawer sides, back & bottom
• Drawer Face
• Slides
• Assembly & Install Hardware

C8 Chocolate

**W8** White

Accessories

A1 Chrome Basket

24"

Add chrome baskets to the Hanging Tower for a unique and stylish type of closet storage. Unlike other baskets on the market, ours rest on top of the sides, eliminating the torque twist that is inheriant in other types of pull out baskets.

A2 Tie/Belt Rack

Keep your belts and ties together in one place with this accessory, allowing you to locate easily the item you are looking for.

A3 Hanging Rail

Simply mount this rail on the wall and then hang the vertical closet parts. It's simple and strong. You will have your closet installed in no time.

Online Planner

It is exciting and easy to create your very own dream closet using our "Online Planner' design tool. Simply enter your wall dimensions and a design is created just for you. From there you can make changes, try different configurations and instantly personalize the layout and design of your closet. Take all the time you like until you have created the perfect closet for your space & budget.
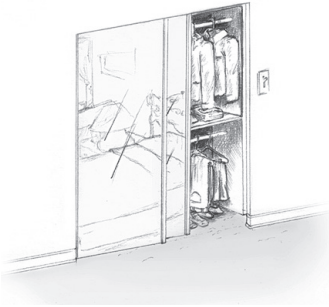

It's simple and fun...

EURO-RITE C L O S E T S ™
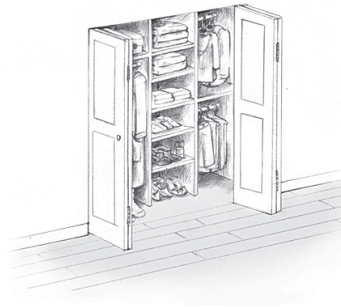

Reach-in (by-pass)

By-pass closets are in every home, in many rooms. They are easy to design and organize. Keep in mind that with by-pass doors the centre of the closet is covered by doors so the tower should be placed to one side or the other.
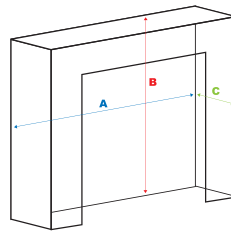

Reach-in (by-fold)

As opposed to the by-pass style, when you have bi-fold doors, it is best to place the modules closer to the middle of your by-fold doors. Frequent use items can be stored in the middle unit.

Walk-in

Walk in closets are very flexible when it comes to where you need storage and how you want to install the shelving and components. Have fun with your design thinking about all you want to store and have a place for.

Measure the Space

Inside Closet Dimensions

Measure the inside dimensions of your reach in closet. Most reach in closets have doors, either by-pass or by-fold. Fill out the dimensions according to the doors you have.

TIP: It is best to measure an empty closet. Walls are rarely square, flat or level. Measure width in different places (top, middle, bottom)
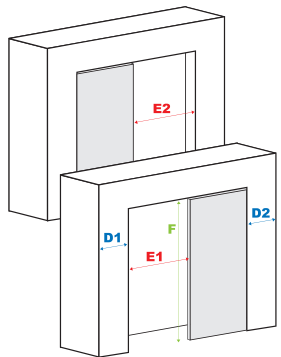

Width (A) [　　　] Height (B) [　　　] Depth (C) [　　　]

Reach-in (by-pass)

To measure by-pass door openings, move the doors to the right and take measurment E1. Then to the left and take E2. D1 & D2 will be from the inside of the left and right wall to the edge of the door opening.
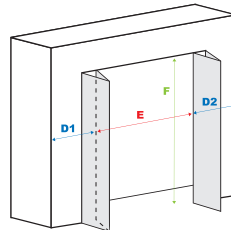

Return (D1) [　　　] Return (D2) [　　　]

Width (E1) [　　　] Width (E2) [　　　]

Height (F) [　　　]

Reach-in (by-fold)

When measuring a by-fold door opening, ensure the doors are resting open. Measurements D1 and D2 will be from the inside of the left and right wall to the edge of the doors at the opening.
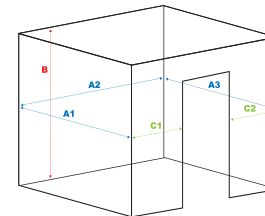

Return (D1) [　　　] Return (D2) [　　　]

Width (E) [　　　] Height (F) [　　　]

Walk-in

Walk-in style closets are simple to measure since the door opening does not usually affect the design. Take note of windows, vents or access panels.
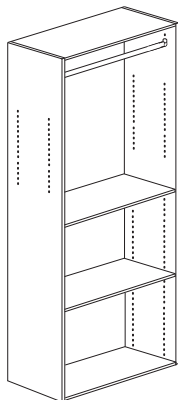

Width (A1) [　　　]

Width (A2) [　　　]
