

INSTALLATION TIPS

DIAGONAL CORNER BASE

Eurorite offers 2 sizes of diagonal base cabinets. A 36" and a 42". These unique cabinets are popular for large kitchens. Both can fit a sink but the 42" is the only one large enough to fit a double basin sink. If you would like a sink in the 36", it has to be a single basin.

When installing a diagonal corner base cabinet here are a few things to remember:

1. The diagonal corner cabinets are not directly mounted to the wall. There is a 5" space between the backboard and the wall.
2. The CSB42 come with 2 doors.
3. The CDB36 comes with 1 door and an adjustable shelf that must be installed prior to the top shelf.
4. It is recommended that a 5/8" minimum filler is installed on either side of diagonal cabinets. It allows adequate space to open doors to adjacent cabinets.
